## Summary

As an accomplished Software Engineer with seven years of industry experience, I possess a comprehensive skill set in back-end development tools such as PHP, OOP, and the popular Laravel framework. Additionally, my proficiency extends to front-end technologies such as Vue.js and Nuxt.js. I have acquired extensive knowledge working with several SQL/NoSQL databases, including MySQL, MongoDB, Redis, Elasticsearch, and data storage like Minio. Furthermore, I am well versed in using queues and message brokers like RabbitMQ.

Throughout my career, I have contributed actively to successful projects within the fintech, financial, payment solutions, and big data domains. These experiences have honed my ability to develop clean, maintainable, and scalable code using industry best practices such as solid principles, design patterns, and comprehensive documentation. My commitment to professionalism and ethical conduct has garnered positive recommendations from managers, team members, and clients.

Driven by a passion for solving complex performance problems and overcoming architectural challenges, I constantly seek opportunities for growth and development. I approach every task with great enthusiasm and thrive in collaborative team environments. Sharing knowledge and mentoring others is an integral part of my work ethic.

Looking ahead, I am eager to leverage my expertise and enthusiasm in contributing to new and innovative projects that push the boundaries of what is achievable. I am committed to delivering high-quality solutions that make a tangible impact in the ever-evolving landscape of software engineering.

Please feel free to reach out to discuss exciting opportunities or learn more about my professional journey.

## Experience

### Software Engineer

Vandar | وندار

Mar 2022 - Present (1 year 5 months)

In the Vandar company, I worked on various projects and services in the fin-tech, payment, and settlement solutions in different departments and developed services like Payment(IPG, Direct-Debit, Wallet, Credit, BNPL, ...) As like as below:

- I designed and developed flexible services for interaction with multiple providers.
- I designed and developed the BNPL service.
- I designed and developed MPG(Multiple Payment Gateway) service. All payment methods exist in this service. If you implement this service once in your system, you don't need a new implementation for each payment method.
- I implemented many banks' APIs for Direct-Debit service.
- I designed and developed a ticketing service.
- I improved Direct-Debit Infrastructure.
- I designed and developed a tool that detects reconciliations and imports in DB.
- I designed and developed a package for standardized API responses and exception handling.

- Unit and functional test cases have been written for projects I've worked on.
- I developed a package that detects critical areas.
- I contributing to all phases of the development life cycle.

## **Software Engineer**

LifeWeb | وبلايف

Feb 2020 - Mar 2022 (2 years 2 months)

LifeWeb has been exploring social media data since 2010. Provides several services such as big data, artificial intelligence, and social network analysis fields and plays an effective and practical role in identifying and meeting customer needs in various social, political, economic, cultural, and scientific areas.

I work on various projects at the level and in the field of big data with prominent managers and colleagues.

- I developed a package for generating static charts.
- I designed and developed a ticketing service.
- I designed and developed a service that exports graphical and logical report files in pdf, HTML, and docx extensions.
- I developed a package called Elasquent for working with Elasticsearch in Laravel Framework, like Eloquent
- I worked on many projects that visualize and ready big data.

## **Fullstack Web Developer**

iTooska

Jan 2017 - Feb 2018 (1 year 2 months)

Ain Andish Tooska was an Engineering software and hardware company founded in 2016 to work in the field of web-based solutions and use modern ideas and technologies. And over the past years, under the brand name Ide Andishe Mobin, it has followed the design and production of web applications, office automation, support, and maintenance of systems as the main focus of its activities. This company is also engaged in the field of training, hardware, support, network, and camera. The continuation of applied studies by the design team of this company as well as paying attention to the increasing technological changes in the field of IT has made the projects carried out by this company have a favorable quality.

I work at iTooska as a Full-Stack Developer. I work on various projects at the level and with prominent managers and colleagues.

## **Education**
